Quick Reference Guide: Firmware Update

All used terms in this quick reference guide are based on the English language setting of your xxter unit. If you use a different language setting, the used terms may vary. Language settings can be changed on the System settings page on the web-interface of your xxter unit.

1) Open the web-interface of your xxter unit by entering the IP address in the address bar of your web-browser. If you don't know you IP address, check the last page of the user manual, your installer may have written it down. Opening the web-interface may result in a request for your login and password. If you do not know this, ask your installer.

2) Open the System settings page.

3) Click on: "Check for firmware updates".

4) If an update is available a notification will appear and you can click "Update Firmware" to start the update process.

5) Wait patiently, this process may take a while, depending on the speed of your Internet connection.

6) After the firmware is retrieved and installed, a restart of your xxter unit is needed to activate the new firmware. A notification will appear and you can reset the device by clicking on "Reboot the device" to do this.

7) After the reboot is complete, you can check if the update was successful by verifying the version number on the "status" page.

8) After performing this procedure, always check for another new update by repeating the above procedure till it states: "Current version is newest, no update available".
