

xxter hotel

KNX hotel room control

The xxter hotel solution allows you to provide your guests access to control their hotel room for the duration of their stay. At the end of their stay or when the reservation is cancelled, access to the room is no longer possible.

The xxter hotel room is a new, separate license and product from the regular xxter product.

Check in

When the guest makes his reservation, the reception can check the guest into the room and choose the relevant "Program". The default check-in and check-out times and the default program for your guests can be set up in a separate management console. Of course, the reception can always make another selection, based on the situation.

Check in

Kamer	<input type="text" value="1"/>
Gast	<input type="text"/>
In	<input type="text" value="2018-03-17"/> <input type="text" value="14:00"/>
Uit	<input type="text" value="2018-03-18"/> <input type="text" value="11:00"/>

Programma

- Restaurant informatie

Scan voor Check in:

QR code

After check-in, a QR code is generated automatically. When the guest scans this code within the period of his reservation, the xxter app will automatically be set up, the appropriate profile is loaded and the guest has access to control his room.

The QR code can be printed or sent to the guest by email.

Program

A personal program can be shown to the user in the app, as a form of narrow casting. This can be used for instance to show the restaurant menu, special offers, the laundry service or relevant information about the surroundings. This page is generated automatically for the hotel guest, based on the options that are chosen by the reception.

Wi-Fi

The Wi-Fi settings of the hotel can be preconfigured in the management console. When the hotel guest uses the QR code to set-up the app, the device will also automatically connect to the configured Wi-Fi. This makes sure that in one scan, everything is ready for the guest. There is no need to provide the Wi-Fi information separately.

Rooms overview

In the rooms overview, you have a clear overview which rooms are checked-in for which periods. Here the reception can also see which programs are selected for every guest. These reservations can always be edited by reception.

Care hotel

By combining the alert service and intercom integration of xxter with the hotel solution, the app can be enhanced with an “Nurse alert” option. In case the guest hits an alarm button in the app, a call will be made to a nurse station, after which a video call connection can be started. This makes the hotel solution appropriate for care hotels, where guests require special attention. The narrow casting of the programs can be used to supply revalidation programs, daily activities or a tv guide.

Image pages

With the image pages of xxter, you are completely free to style the look and feel any way you want. This allows you to create a profile that exactly matches the identity of the hotel.
